

GreenBytes Corporate Background

Overview:

GreenBytes[®], Inc. was founded in 2007 with the mission of helping to solve the rapidly growing data storage and energy efficiency crises facing IT operations. To address the market's needs, GreenBytes created high-performance, energy-efficient storage appliances focused on reducing power consumption and total cost of ownership, and optimizing data storage capacity.

GreenBytes' new GB-X Series deduplication storage appliances incorporate energy-efficient technologies and the industry's highest levels of scalability and reliability in an easy-to-use, cost-effective package, designed to bring the benefits of data deduplication to the broader storage market. Ideal for both primary and secondary storage environments, GreenBytes GB-X Series products offer both NAS and SAN functionality with SSD-enabled performance.

Founded: 2007

Funding: \$8 million, Battery Ventures, June 2009

Management Team:

Robert Petrocelli, Chief Executive Officer

Richard Petrocelli, President and Chief Operating Officer

Matthew Aitkenhead, Vice President, Product Marketing and Technical Alliances

Richard Shea, Vice President, Sales

Products:

GreenBytes' GB-X Series appliances combine highly innovative software technology with a world-class server platform to address the storage and energy efficiency crises facing today's IT operations. GreenBytes, through its GBFS (GreenBytes File System), has developed the first general purpose storage appliances to incorporate native inline deduplication into an enterprise-scale file system. Unlike other deduplication technologies that are primarily used only for backup operations, GreenBytes has created storage appliances that permit real-time, on-the-fly deduplication of file blocks as they are stored, expanding the scope of applications into primary storage, as well as backup.

GB-X storage appliances include multiple unique, patent-pending technologies which dramatically boost storage and deduplication performance while maintaining superlative ingest rates as the data store scales. GreenBytes' GB-X Series appliances are easily and efficiently scalable from an entry point of 12 TB up to 216 TB. The GB-X Series also

boasts superior energy efficiency and cost effectiveness - all in an easy-to-use platform backed by GreenBytes' world-class 7x24x365 customer service and support.
